

OFFO COMMENT DECISION TREE

(Use this before every reply)

STEP 1 — CLASSIFY THE THREAD (Do NOT Reply Yet)

Ask:

A. Is the post...

- ☐ A **personal experience / frustration**
- ☐ A **question about fit or ownership**
- ☐ A **brand/spec debate**
- ☐ A **news / policy / sales post**
- ☐ A **rant with no questions**

Action:

- If **brand/spec debate OR news/policy** → ⚠️ *Usually skip*
 - If **personal experience OR ownership question** → ✅ *Proceed*
 - If **rant** → Proceed **only if you can calm, not correct**
-

STEP 2 — CHECK FOR A “SAFE ENTRY POINT”

Before commenting, look for at least **one** of the following:

- ☐ User mentions *their routine*
- ☐ User mentions *charging access*
- ☐ User mentions *schedule, move, winter, family*
- ☐ User says “I didn’t expect this”
- ☐ User says “worth it but...”

Action:

- If **none** are present → Do NOT force it

- If **one or more** are present →  *Proceed*
-

STEP 3 — IDENTIFY THE FRICTION TYPE

Choose the **primary friction** (pick ONE):

- ☐ Shared / apartment charging
- ☐ Public charging reliability or app chaos
- ☐ Schedule variability
- ☐ No backup vehicle
- ☐ Relocation / life change
- ☐ Tesla → non-Tesla transition
- ☐ Seasonal / winter effects
- ☐ Early buyer uncertainty

This determines your reply shape.

STEP 4 — BUILD THE COMMENT (MANDATORY FORMAT)

Your comment **must** follow this structure:

VALIDATE (1 sentence)

- Acknowledge the experience
- No agreement or disagreement

 Example:

“That frustration makes sense — especially once you’re already trying to make it work day to day.”

 Avoid:

- “You’re right”
- “That’s wrong”
- “Actually...”

2 REFRAME (1–2 sentences)

- Shift from surface complaint → underlying friction
- Remove blame (user + EV tech)

✓ Example:

“What makes it stressful isn’t range or charger count, it’s not knowing how predictable the setup will be once routines change.”

✗ Avoid:

- Solutions
- Recommendations
- Explanations that sound instructional

3 OPEN (1 reflective question)

- Invite self-assessment
- Not a yes/no question

✓ Example:

“Does this show up more when your schedule changes or when charging access is shared?”

✗ Avoid:

- “Have you tried...”
- “Why don’t you...”
- Multiple questions

STEP 5 — DECIDE WHETHER TO REDIRECT (IMPORTANT)

Only consider redirecting if **ALL** are true:

- ☐ User disclosed personal constraints

- ☐ User expressed uncertainty (I wish I knew earlier”)
- ☐ Thread is already several replies deep
- ☐ Tone is calm, not argumentative

If YES → Gentle Mention Allowed

Use **exact style** below:

“This kind of ‘mostly works except...’ discussion is what people share in r/EVRoutine — it’s focused on lived setups, not specs.”

Stop.

No link unless asked.

If NO → Do NOT redirect

STEP 6 — CHECK FOR RED FLAGS (STOP IF ANY APPLY)

Do NOT comment if:

-  You feel the urge to “correct” someone
-  You want to explain how something works
-  You’re tempted to defend EVs
-  You’re tempted to mention tools, features, or data

If in doubt → **skip the comment**

Skipping is success.

STEP 7 — POST-COMMENT SELF-CHECK (After Posting)

Ask yourself:

- Did I reduce tension?
- Did I invite reflection?
- Did I avoid advice?
- Did the reply sound like a neutral EV owner?

If yes → good comment
If no → learn and move on

GOLDEN RULE (PRINT THIS)

You are not here to solve the problem.

You are here to help people name it.

WHAT SUCCESS LOOKS LIKE

You'll know you did it right when:

- Others reply with personal details
- Someone says “this is exactly my situation”
- The thread calms down
- Another user answers using your framing
