

OFFO COMMUNITY STUDY SHEET

(Print • Read Daily • Use While Commenting)

PURPOSE (Read First)

Your job is to reduce friction in conversations, not win arguments. You help people name why something feels off without blaming EVs, brands, or themselves. If someone leaves a thread thinking:

- “Oh — this isn’t about range.”

Then you did your job.

WHAT TRIGGERS REPLIES

- Framing questions (not opinions)
- Normalizing doubt (“this mostly works, except...”)
- Naming experiences people recognize but haven’t articulated

Things to avoid:

- Definitive statements
- Solutions
- Specs
- “You should”

WHERE FRUSTRATION SHOWS UP

From the data so far, we have seen that people's general frustration with the EV experience generally happen at execution (standing at the charger), after routine changes (schedule, move, season), when predictability breaks, when systems behave inconsistently

WHAT MAKES PEOPLE OPEN UP

You want to validate without agreement. Do not blame (user or system) and focus on routine, not the car. People open up when they feel not evaluated.

WHERE ARGUMENTS START

Arguments usually starts at the **Brand comparisons level, Infrastructure blame, Cost outrage, Absolutes ("EVs are fine / broken")**

WHAT CALMS THREADS

You want to use conditional language ("depends", "until", "in some setups") and try reframing from ideology → logistics. Adding structure and not answers.

CORE OFFO LANGUAGE (Use These)

- *"This mostly works, except..."*
- *"It's not range; it's predictability"*
- *"This depends more on routine than the car"*
- *"This works until something changes"*
- *"That's a fit issue, not a tech failure"*

COMMON FRICTIONS (MEMORIZE)

- Shared / unreliable charging
- App & tariff chaos
- Schedule variability
- No backup vehicle
- Apartment living
- Relocation
- Execution-time failures

MOMENTS OF UNCERTAINTY (Key Signals)

- *“I wish I knew this earlier”*
- *“Would this still work if I moved?”*
- *“Is this normal or just me?”*
- *“At what point does this break?”*

These are pull moments, not pitch moments.

COMMENT STRUCTURE (MANDATORY)

You must Validate (1 sentence), Reframe (1–2 sentences), Open (1 question), lead to r/EVRoutine Community. Stop. No conclusion. (Use as templates — adapt, don’t copy verbatim)

1) Shared / Apartment Charging

“That frustration makes sense; shared charging usually works on paper but feels different once you’re competing for access. The stress is not about range; it’s not knowing if charging will be available when you need it. Does it get harder when your schedule shifts or when demand spikes?”

2) Public Charging App / Tariff Chaos

Issue isn't that chargers exist but it's not knowing which app or tariff will work when you're standing there. Does this mostly show up on longer trips or anytime you're off your usual routine?"

3) Schedule Variability

"EV routines tend to feel smooth when days are predictable and a bit overwhelming when plans change. Planning starts to feel like a requirement instead of a convenience. How stable is your week most of the time?"

4) No Backup Vehicle

"Having no fallback really changes how disruptions feel. Things that are minor annoyances for some people turn into stress multipliers. Do you notice this more during weather events or unexpected plan changes?"

5) Tesla → Non-Tesla Transition

"A lot of people don't realize how much predictability they internalized until it's gone. Losing that consistency can feel like overwhelming even if the hardware is fine. Was the adjustment harder around charging, planning, or both?"

6) Relocation

"Moves tend to surface fit issues that weren't visible before. A setup that worked well in one place can quietly stop working in another. Did anything about your charging access or routine change after the move?"

7) Winter / Seasonal Changes

Seasonal shifts are where assumptions get tested. It's not that things stop working, they just require more planning. Did winter mainly affect range, or did it change how predictable charging felt?

8) 'Worth It, But...' Owners

"That 'worth it, but...' feeling is common. It usually means the core fit is there, but certain parts of the routine carry more mental load than expected. Which part surprised you most?"

9) Early Buyer Doubt

"That hesitation is reasonable. Most of the real tradeoffs only show up once routines settle. Which parts of your day would you expect to stay consistent, and which might change?"

FINAL RULE (PRINT THIS)

If your comment sounds like advice, rewrite it. If it sounds like understanding, post it.
